Education

- **University of Science and Technology of China** — Anhui, China
  Ph.D. in Control Science and Engineering; GPA: 3.62/4.3 — *09/2023 - 06/2028 (expected)*
  Ph.D. Advisors: Feng Zhao, Bo Dai, and Dahua Lin
- **Wuhan University** — Wuhan, China
  B.Eng. in Surveying and Mapping Engineering; GPA: 3.95/4.0 (Rank: 1/225) — *09/2019 - 06/2023*

Research Experience

- **Qwen, Alibaba Group** *Research Intern | Mar 2026 - Present*
  - **Core Contributor to Qwen-Image-2.0 and Qwen-Image-3.0**:
    - Built a Blender-based, 3D-grounded data engine for controllable image editing, generating paired supervision from explicit camera and object transformations: viewpoint/zoom, translation, rotation, scaling, insertion, and removal.
    - Contributed to Qwen-Image-3.0 pre-training through image-editing data annotation and curation, data-mixture design and balancing, and case-driven diagnosis of systematic failure modes.
    - Developed RL post-training for image editing, improving overall instruction following by refining reward models and training prompts, and enhancing human identity and text consistency with task-specific reward models.

- **Shanghai AI Laboratory** *Research Intern | Dec 2022 - Mar 2026*
  - **Feed-forward 3D Gaussian Splatting – AnySplat**:
    - Led the end-to-end design of a feed-forward system that jointly predicts 3D Gaussians and camera intrinsics/extrinsics from uncalibrated, sparse-to-dense image collections in a single pass.
    - Developed VGGT-based pseudo-label distillation and differentiable voxelization, enabling RGB-only training while removing 30–70% of redundant Gaussians with comparable rendering quality.
  - **Large-scale 3DGS – Horizon-GS, Octree-GS, and MatrixCity**:
    - Led Horizon-GS, formulating aerial-to-ground reconstruction conflicts and designing coarse-to-fine training with camera-distribution balancing for unified cross-view rendering.
    - Developed Octree-GS with LOD-structured Gaussians, grow-and-prune densification, and dynamic level selection, sustaining $\geq$30 FPS and up to 10$\times$ faster rendering in large scenes.
    - Built the Unreal Engine 5 pipeline behind MatrixCity (519K aerial/street images, 28 km^2), now widely used to benchmark city-scale reconstruction and train emerging 3D foundation models.

Projects

- **Open-LVSM: Open-source LVSM Reproduction** Feb 2025 - Mar 2025
  OpenRobotLab/open-lvsm
  - Reproduced LVSM (ICLR 2024 Oral), a large-scale view-synthesis model with minimal 3D inductive bias, and released the implementation for community use.

- **LandMark: City-scale 3D Foundation Model** June 2023 - Aug 2024
  Core Member | Project Website
  - Contributed data processing, core algorithm design, and demo development for a city-scale NeRF system supporting 4K training over areas up to 100 km^2, real-time rendering, and interactive editing.

Honors and Awards

- Ph.D. First-Class Academic Scholarship – Sep 2024
- Ph.D. Second-Class Academic Scholarship – Sep 2023
- Outstanding Graduate Student – Jul 2023
- National Scholarship of China – Nov 2021, Nov 2020
- First-Class Scholarship – Nov 2021, Nov 2020

Professional Skills

- **Technical Skills**: Python, C++, CUDA, PyTorch, Blender, Unreal Engine, COLMAP
- **Languages**: Mandarin (native), English
